HOW TO MEASURE FOR A WINDOW AWNING

NOTES:

*Minimum clearance required above J-channel or Trimed Window Frame is 2".

*Minimum clearance required on each side of a J-Channel or Trimed Window Frame is 2".

EXAMPLE: If the out side width of your J-Channel or Trimed Window Frame measures 50" you will need an awning width of 54" or wider, which means that you would have to order P/N AW64__ which measures 64" wide.
